

Systems Consulting Group (SCG) Launches Service to Help AEC Firms Evaluate and Implement Deltek Vision and BST Global Software Applications

SCG's Industry Experience Saves AEC Firms Time and Money While Mitigating Risk

MINNEAPOLIS, June 2, 2010 / PRNewswire -- Systems Consulting Group, LLC (SCG), a leading provider of consulting services and industry-specific application software for architecture, engineering and construction (AEC) firms, has launched a service to help AEC firms evaluate and implement their purchases of Deltek Vision or BST Global enterprise resource planning (ERP) software applications.

"SCG has helped us save more than \$1 million annually while enabling us to improve our service delivery and our competitive position," said Jon Carlson, CEO of Braun Intertec Corporation, a leading Midwest provider of environmental and geotechnical engineering services headquartered in Minneapolis. "BST Global's ERP applications are a major improvement to our operations, but without SCG's involvement, Braun Intertec would not be as productive as we are today," he noted. "We are and have been a very satisfied SCG customer for many years," Carlson added.

SCG, led by CEO Mike Anders, has a distinguished long-term track record of helping clients enhance profitability, cash flow, service delivery and competitive position by instituting best practices in process and technology. SCG has worked with several Midwestern AEC firms to make their operations more efficient by implementing Deltek Vision and BST Global application software, along with AEC-specific applications for field data collection, project administration, CRM and customer-facing web portals.

"In our experience, more than 75% of mid-size AEC firms will consider these vendor offerings when looking at their enterprise application needs," said Anders. "In meeting with AEC executives, we often find that they have similar concerns about making appropriate long-term decisions on software vendors and the associated implementations. Those who engage SCG as project leader benefit from our years of experience in using these software programs to build application solutions that save clients time and money and help them curb risk."

A description of SCG's new offering, "Making the ERP Decision – Deltek Vision vs. BST Global – An Executive Roadmap" can be found without obligation at www.scg-corp.com.

Availability and Pricing

The new services are available immediately. Pricing is based upon the scope of the project.
